With regard to most drum residues, California's CCR 66261.7 provides that "Empty" drums are exempt from hazardous waste regulation if they are managed in specific ways. A drum which previously held a hazardous material is California "Empty" only if:

1. It has been emptied by the generator so that —
 - a. If the residue is pourable, no material can be poured or drained from the drum when the drum is held in any orientation (e.g., tilted, inverted, etc.); or
 - b. If the residue is not pourable, no material remains in the drum that can feasibly be removed by physical methods (e.g. scraping, chipping, troweling, etc.), and
2. It meets the definition of an "empty container" in the federal hazardous waste rules, 40 CFR 261.7.

In addition to the above, drums must be labeled and packaged in accordance with applicable U.S. Department of Transportation requirements (49 CFR 173.29) and shipped for scrap preparation (recycling), reconditioning or remanufacturing.

If the drums are not California "Empty," or are shipped for disposal, they must be managed as hazardous waste and are fully regulated by the Department of Health Services as such.
